# CLIMATE GRAPHS

The climate graphs should be used in conjunction with the maps illustrating the climate of the World, and also the more detailed maps of the Continents. The stations have been selected to show types of the various climates to be found throughout the World. Wherever possible the graphs show average observations based upon the recognized standard period of thirty years, and in all other cases over as long a period as possible.

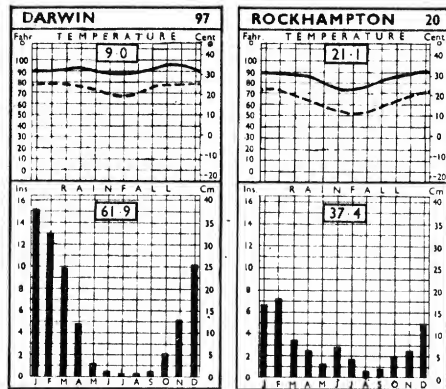

On each graph the name of the station is followed by its height in feet above sea-level, so that comparisons between stations can be made after allowing for elevation. Temperatures are given in degrees Fahrenheit and rainfall in inches. The continuous line on the temperature graphs shows the monthly means of daily maximum temperatures and the broken line the monthly means of daily minimum temperatures. From these the mean monthly actual temperatures can easily be determined. The mean annual range of temperature is given in the small panel above the temperature graphs. The rainfall graphs show the average monthly rainfall, and above them in a small panel is given the average total annual rainfall.

All figures are based on an average of post-war years so as to eliminate as far as possible the yearly variations due to drought or other climatic causes. Wool production depends on the wool clip per sheep as well as on the number of sheep. Compare Australia and Russia where the average wool clip is approximately 9lb. and 3lb. respectively. Note how sheep rearing is related to climatic and natural regions.

Figures are based on an average of post-war years with the exception of U.S.S.R., where pre-war averages are used. Although Australia ranks eighth as a producer it is one of the three chief exporting countries.

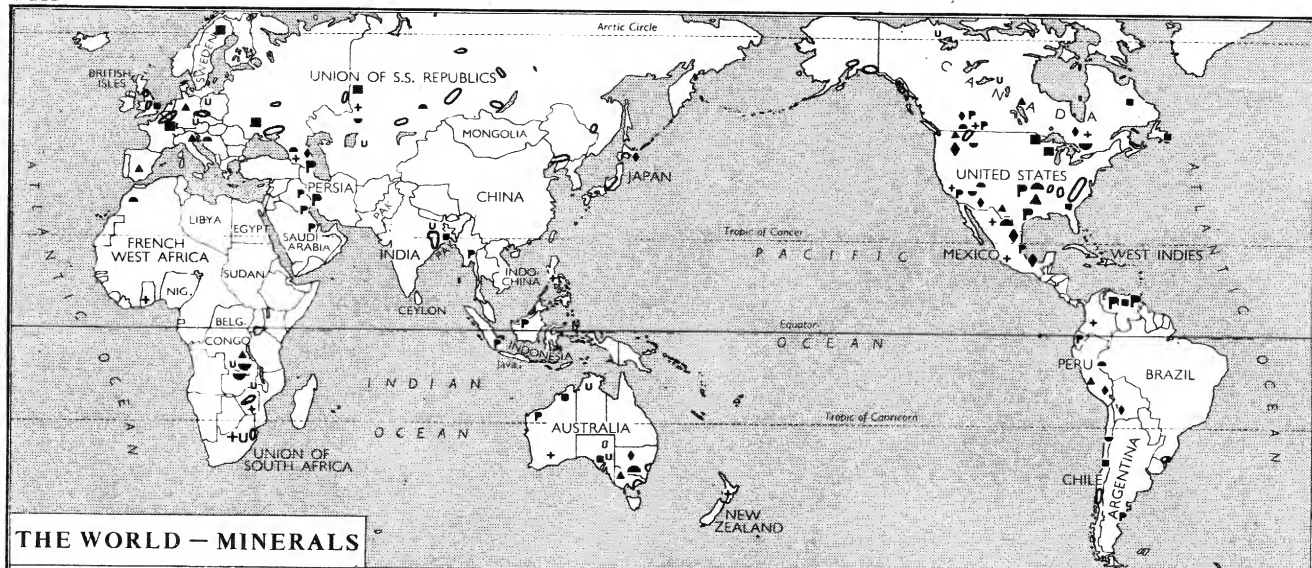

## THE WORLD - CATTLE

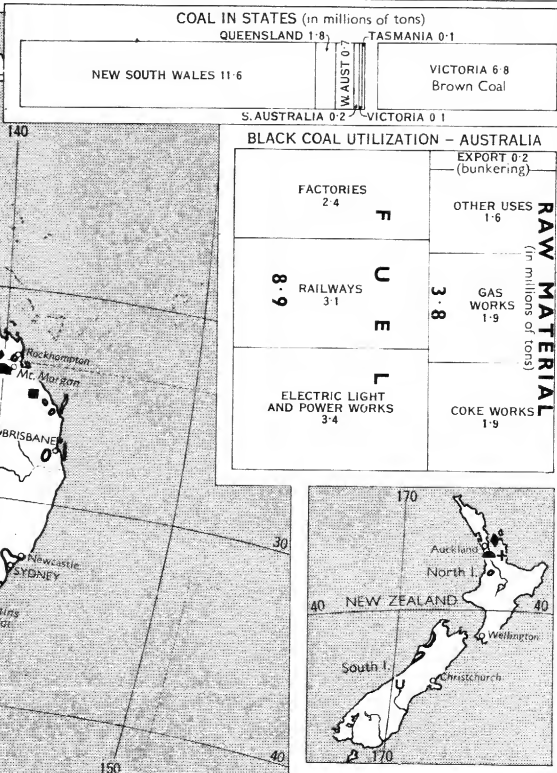

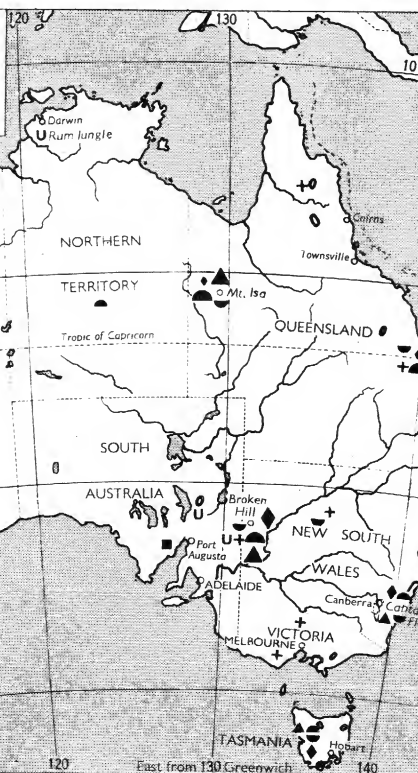

All figures are based on an average of post-war years so as to eliminate as far as possible the yearly variations due to drought or other climatic causes.

## THE WORLD - MINERALS

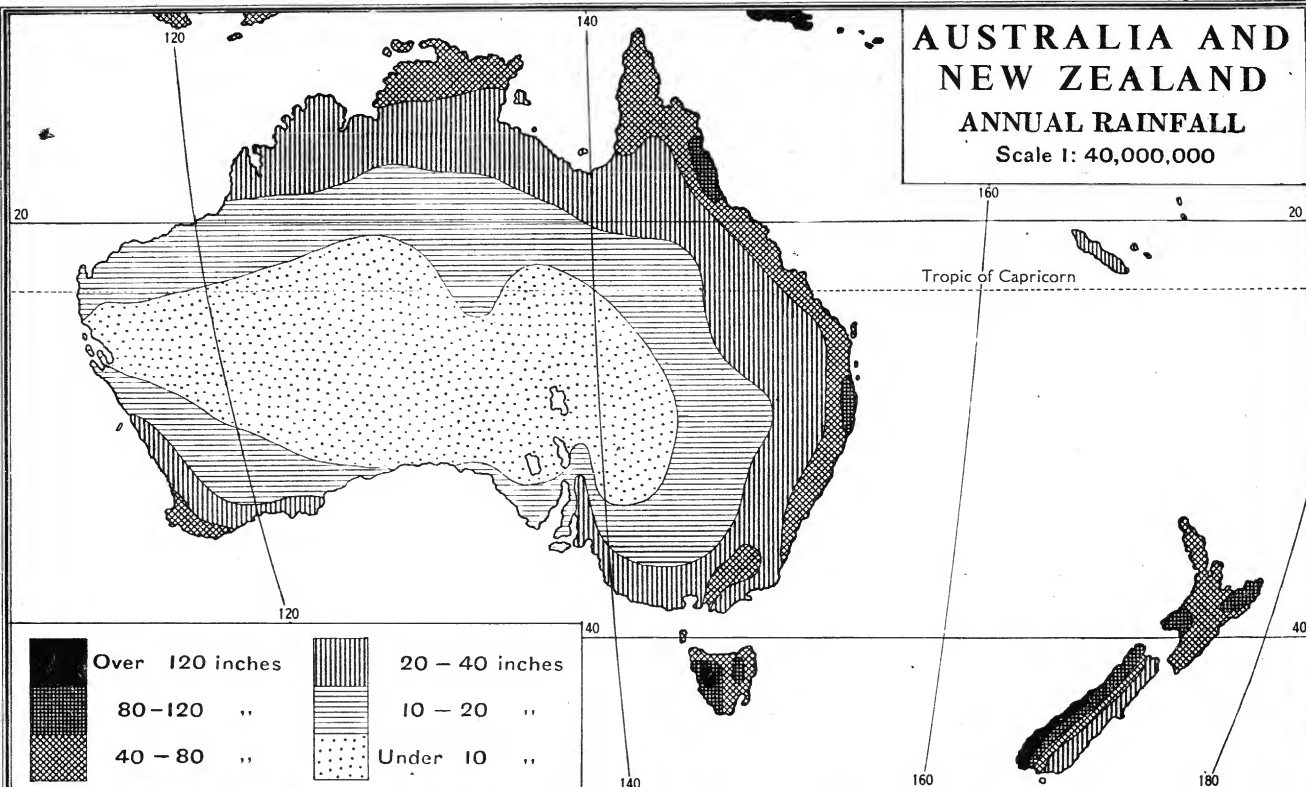

All figures are based on an average of post-war years so as to eliminate as far as possible small yearly fluctuations in production. Figures in U.S.S.R. are estimated.
